

Highly available data center powerhouse for mission-critical applications.

## SUN FIRE™ 6800 Midframe Server

### HIGHLIGHTS

- Up to 24 high-performance, award-winning UltraSPARC™ III processors in a symmetric multiprocessing architecture
- Industry's first fully redundant, reconfigurable system interconnect
- Full hardware redundancy, Dynamic Reconfiguration\*, online upgrades\*, concurrent maintenance\*, clustering, and accelerated system recovery help provide for continuous, highly available computing
- Runs the proven, tested Solaris™ 8 Operating Environment
- Four Dynamic System Domains\*\* for mainframe-like partitioning; Solaris™ Resource Manager for advanced workload management
- Hot-swappable common components for excellent investment protection
- Sun™ Management Center software helps enable administrators to actively manage thousands of Sun systems through a simple Java™ technology interface, Web browser, or command line interface
- Worldwide consulting, educational, support, and remote services to help provide continuous availability

For data warehousing, data mining, server consolidation, and other mission-critical data center applications, the UltraSPARC™ III technology-based Sun Fire™ 6800 server is a powerful, highly available solution. Featuring the redundant, reconfigurable Sun™ Fireplane interconnect, this server delivers impressive total system performance. Full hardware redundancy and a variety of advanced mainframe-class availability

features, such as Dynamic Reconfiguration\*, online upgrades\*, and concurrent maintenance\*, help provide maximum uptime. With Solaris™ Resource Manager and Dynamic System Domains\*, the server has the flexibility to accommodate changing resource requirements across multiple applications. For mission-critical environments where manageability, performance, and availability are key, the Sun Fire 6800 server delivers.

\*These capabilities will be available in 1st half of 2002
